aluminium,
brass, copper
and other metals.

Non woven Rolls for Scotch Brite finishing

Nord Est abrasivi s.r.l. *Manufacturer of abrasive wheels and brushes for sanding painted and unpainted wood for the satin finishing of metals, for plastics, ceramics and many other applications.*

Non woven Rolls for Scotch Brite finishing

Aluminium Oxide (A/O):

This product is deeply aggressive and stubborn. It has a wedge shaped structure. It will go through even strong surfaces breaking down the layer, leaving a wide and uniform mark.

Silicon Carbide (SiC):

Widely used in the Abrasive sector because of its strong and cutting power. It's suitable for finishing and super-finishing. The mark is deep and sharp, this is why the surface results very shining.

Technical information:

Flap roll A/Coarse – Grit 80

Very aggressive product made of aluminium oxide, used in the first position in order to work on damaged surfaces. Ideal for thick plates because it breaks down the layer in order to prepare the surface for uniform finishing. Colour: maroon, deep red.

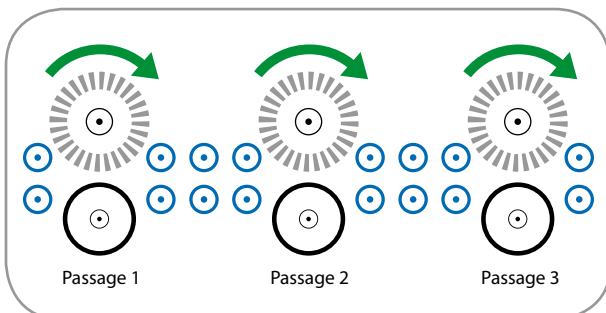

Flap roll MEDIUM – Grit 120

This product must be used in the first passages. It will uniform the surface for the final passage.

Flap roll FINE – VERYFINE – ULTRAFINE – Grit 180-320-600

These articles are suitable for the last positions. The mark is deep and sharp, the surface results shining.

Our flap rolls are available in Aluminium Oxide and Silicon Carbide.

AVAILABLE SIZE

Ø diameter (mm)

From 250 to 450

Hole (mm)

From 115 to 300

Length (mm)

From 500 to 1650

Our products can grant:

- wet and dry application
- uniform surface
- to avoid any beat thanks to the dynamic balancing of the rolls.
- non standard size following the customer needs
- increasing of working speed

Use:

- Stainless steel service centres and steelworks
- Furniture sector
- Medical instruments
- food industry equipment
- large scale catering
- marine industry and carpentry
